SUMMARY

Graduate Software Engineer with Ericsson enterprise engineering experience developing Python automation tools, workflow solutions and software modelling systems. Experienced in Flask APIs, data-processing pipelines, enterprise automation and AI-assisted engineering workflows. Holds a BSc (Hons) in Software Design with Cloud Computing for Artificial Intelligence (Second Class Honours Grade 1 – 2:1).

EXPERIENCE

Software Engineering Intern

Ericsson

January 2025 – August 2025, Athlone

- Engineered Python-based automation tools to streamline enterprise software modeling workflows and reduce manual effort.
- Architected data-processing pipelines for high-volume structured datasets (CSV/XLSX), ensuring data integrity and validation.
- Developed jArchi automation scripts for automated model generation and property assignment to improve system visualization.
- Implemented Flask-based microservices to integrate automation components into scalable, repeatable engineering workflows.
- Collaborated across cross-functional teams in an Agile environment to identify and automate engineering bottlenecks.
- Contributed to AI-assisted automation initiatives and agent-based workflow concepts to support operational efficiency.

PROJECTS

PRM Importer & Engineering Automation Tool

Ericsson

Developed Python automation tooling for the validation and transformation of large engineering datasets. Automated model generation workflows using custom scripts, reducing manual intervention and improving data consistency across engineering models.

GymBro+ Smart Workout Tracker & Educational AI Coach

TUS Final Year Project

Built a full-stack fitness platform and AI coach using Flutter and FastAPI. Leveraged PostgreSQL for robust data management and integrated AI-assisted coaching features to provide personalized workout insights and automated tracking.

Atria Supply Chain Website

Atria Supply Chain

Architected and deployed a production-ready supply chain management website for a real-world client using Next.js and TypeScript. Implemented responsive UI with Tailwind CSS and managed deployment via Vercel, ensuring high performance and scalability.

EDUCATION

BSc (Hons) Software Design with Cloud Computing for Artificial Intelligence

Technological University of the Shannon (TUS) • 2020 – 2026

- Second Class Honours Grade 1 (2:1).

SKILLS

Python, Java, JavaScript, TypeScript, SQL, PHP

Flask, FastAPI, REST APIs, React, Next.js

Python Automation, Workflow Engineering, Enterprise Software Modelling, Data Processing Pipelines, AI-Assisted Automation

PostgreSQL, MySQL, HSQLDB

Git, Docker, Linux, Node.js, Vercel, VS Code, Archi, jArchi
