

JAMES TROY

Graduate Software Engineer | Agentic AI | Cloud Computing

Tullamore, Co. Offaly, Ireland | 085 871 0990 | jamesthomastroy@gmail.com

PROFILE

Software engineering graduate (2:1) specialising in Cloud Computing for AI, with an Ericsson Athlone placement in ENM Software Modelling Automation. Experience in agentic AI workflows, Python automation, REST APIs and client web deployment, supported by academic foundations in machine learning.

TECHNICAL SKILLS

Agentic AI: AI coding agents, multi-step task execution, iterative debugging and test verification

Cloud and CI: Docker, Linux/WSL, Vercel deployment, GitHub Actions, cloud computing coursework

Languages: Python, Java, SQL, JavaScript, TypeScript, Dart

Testing and delivery: Automated testing, Python unittest, Flutter tests, debugging

Backend and data: FastAPI, Flask, REST/JSON APIs, PostgreSQL, MySQL, Pandas

Tools and practices: Git, Agile, Archi/jArchi, code reviews

EXPERIENCE

Software Engineering Intern | Ericsson, Athlone | Jan 2025 - Aug 2025

- Built a Python/Tkinter PRM importer for the ENM Software Modelling Automation team, merging CSV/XLSX data with Archi models and adding duplicate checks and output validation.
- Automated deployment views, property assignment and model organisation using JavaScript/jArchi and JSON.
- Implemented a Flask API route to invoke Node.js automation; tested and debugged workflows and checked generated outputs for consistency.
- Collaborated in an Agile engineering team using Git, code reviews and documentation to understand requirements and improve automation tools.
- Gained team exposure to AI-driven automation initiatives and agent-based workflow concepts.

Client Software Development and Automation | Atria and Midland Hygiene Products | 2026

- Developed and deployed the Atria website using Next.js, TypeScript and Tailwind CSS on Vercel, including a Resend contact form and search engine metadata.
- Built Python/Pandas tools for Midland Hygiene to clean supplier spreadsheets, check duplicates and flag uncertain product matches for manual review.

ACADEMIC AND PERSONAL PROJECT

GymBro+ | Flutter, FastAPI, PostgreSQL

- Built a full-stack workout tracker with REST APIs, relational data models, offline storage and AI-assisted educational coaching.
- Agentic AI workflows: used coding agents to plan, implement, debug and verify changes; established a passing baseline of 125 backend tests and 10 Flutter tests.
- Configured GitHub Actions to run Python unittest, Flutter tests and static analysis, providing repeatable checks on application changes.

EDUCATION

BSc (Hons) Software Design with Cloud Computing for Artificial Intelligence

Technological University of the Shannon, Athlone

Second Class Honours Grade 1 (2:1) | Academic foundations in machine learning
